

STRUCTURAL ENGINEERS REPORTS - COMMERCIAL

We are structural engineering consultants with extensive expertise in the investigation and analysis of all types of building structures.

In addition to our skills as designers we possess a long track record of preparing structural engineers reports for both commercial and domestic properties.

Our team of chartered engineers have experience of all construction methods and materials as well as valuable local knowledge regarding geology and ground conditions.

We understand what is important to our clients and our reports and advice reflect this. We will always:

- ✓ Focus on key risk areas
- ✓ Write in plain English
- ✓ Make sensible and practical recommendations

The conclusions of our reports can be key factors in any property transaction whether they are factored in to a lending decision or used to assist in price negotiations with the vendor.

For landlords or owners, we can assist in determining the scale and cost of ongoing maintenance or more urgent repairs that may be required.

We provide fixed price quotations and will coordinate trial excavations and drains tests if required.

Please contact us to discuss your requirements.
